

UNITED ELECTRONIC TECHNOLOGIES ROCKS THE OIL SANDS SHOW!

Fort McMurray, Alberta Tuesday September 14, 2010

Securing the Oil Sands Just Got a Whole Lot More Affordable!

Ft. McMurray AB.— Lean, clean, a super machine!

United Electronic Technologies a division of United Protection Security Group Inc. (UPSG trades as TSX-V, UZZ), today has its public market introduction of the EYECommand a “green security solution” which by all accounts is going to revolutionize the way companies protect their hard assets out in the field.

“EYECommand is a fully autonomous, all weather, remote video surveillance unit that changes the method industry protects and defends remotely located facilities,” advises Chris Jorstad, President of United Electronic Technologies (UET).

“Our research and development team has partnered with Four Stones Technologies Inc. to build an industry leading product,” Jorstad reports.

Specifically built to support the petrochemical industry EYECommand has incorporated three years of research and testing to ensure the product can handle the extremes of Alberta climate and geography. Utilizing advanced fuel cell technology with best in class video transmission and monitoring technology the EYECommand unit is capable of remaining on station in excess of 100 days without the need for maintenance.

EYECommand provides industry with remote monitoring of facilities and assets which are the target of criminal and terrorist groups. Video and sensor data is transmitted to UET’s Central

United Electronic Technologies, a division of United Protection Security Group, “unleashes the EYECommand” at the 2010 Oil Sands Show.

monitoring center where the information is analyzed and the level of threat is classified.

The “Live Central Monitoring” station is located in Edmonton, and is not an off-shore affiliate as is often the case when security companies offer any type of monitoring. Jorstad let us know how this team supports the EYECommand wherever it is deployed.

“Our in-house team in Edmonton coordinates rapid response teams, police and customer personnel to effectively manage the situation.”

“In fact, we are very proud of being able to produce hard evidence, which is retained and provided to both the customer and law enforcement agencies to aid in criminal and civil proceedings when required,” said Jorstad.

The power of EYECommand is the ease and cost effectiveness of deployment. Customers gain the confidence that their assets are protected at a fraction of the cost of traditional security services. Additionally customers yield benefits in Work Alone and Health and Safety compliance and the ability to monitor on site

activities of their staff to ensure their compliance to safety requirements. These benefits plus the tremendous savings in green house gas emissions make EYECommand the premier security solution. Looks like green, just took on a whole new meaning!

A. Clarke, Vice President, National Sales and Marketing. UPSG Inc.
