Mobile Surveillance

Our rapidly deployed Mobile Surveillance Units are ideal for locations where power and communication methods are limited or unavailable. Our video systems are tamper-resistant and monitored by our **24-hour Remote Video Monitoring Centre**. Many clients find our electronic solutions to be a highly functional and cost effective method of protecting their property.

Remote Digital Video Monitoring allows our highly trained monitoring staff to see what is happening at your site, assess the situation quickly and immediately dispatch Mobile Patrol Units and local authorities.

Our mobile surveillance units are self-contained for use on any type of site that requires live monitoring. Each unit is powered by solar panels and batteries with an inverter to convert power as well as a backup generator. Units come complete with a fully loaded DVR, monitor, four low-light day/night cameras and Blue Tree modem for internet transmission. Units can also utilize satellite transmission where required, and because we work with web-based technology, we can monitor anywhere for efficient cost.

Our monitoring centre captures any movement and allows us to dispatch police as well as United's Mobile Response Units. We immediately notify clients should any threat be present at or near your site.

Mobile surveillance units are equipped with:

- All-weather low light, day/night cameras
- Reflective decaling

Each Mobile Surveillance Unit is completely portable and can be relocated anywhere within a site to accommodate client requirements. Recorded information is court-ready in the event any images need to be submitted as evidence in the prosecution of individuals.

Pricing is based upon the needs of each client and may vary from site to site.
